```
Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                              Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Antifibrillogenic peptide #10.

XXXEXEXE

```
cc other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' fragments Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or at least 1 region of an amyloid protein, e.g. the beta-sheet region or at least 1 region of an amyloid protein, e.g. the peptides or thair immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides and immunogenic peptides and the all-D derivative peptides and in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response, preventing fibrillogenesis and associated cellular toxicity. The amyloid in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response, proventing fibrillogenesis and associated cellular toxicity. The amyloid cellular fortion (e.g. tuberrulosis) cerebral amyloid angiopathy, and creutzfeldt-Jakob diseases, e.g. bovine spongiform encephalitis, chromic infection (e.g. tuberrulosis) or chromic inflammation (e.g. tuberrulosis) archanic inflammation (e.g. tuberrulosis) archanic inflammation (e.g. tuberrulosis) amyloidosis eassociated with chromic infection (e.g. tuberrulosis) archanic inflammation (e.g. tuberrulosis) amyloidosis associated with amyloidosis found in long-term haemodialysis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 29; DB 4; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                     Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Preventing/treating amyloid-related disease, especially Alzheimer's disease, compribes administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                             Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and

The present sequence is that of an all-1 peptide suitors to the preparing vaccines for preventing or treating Alzhaimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid related disorders in humans. It is based on a portion of inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid residues with other amino acid residues or non-amino acid tragments. Vaccines of the invention acid residues or non-amino acid controlled to a configuration amino acid tragments. Vaccines of the inventions. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein. e.g. the beta-sheet region or at least 1 region of an amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides and immunogenic peptidomimetics. Examples include all-D peptides or orresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and immunogenic peptidomimetics a preferential TH-2 or TH-1 response, or related diseases may be localised amyloid-beta peptides or corresponding tibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloid-signes associated with created diseases may be localised amyloidosis, e.g. diabetes type II, neurodegenerative diseases, scrapte, cerebral amyloid anglopathy, and creating infection (e.g. tuberculosis) or chronic inflammation (e.g. themmatoid arthritis), familial Medalterranean fever [FMF] and systemic amyloidosis found in long-term haemodialysis patients
which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting molety, a linker molety and a labelling molety. The cagnit is of general formula A.t. (A. l. n. k) z-A labelling molety. The cagnit is of general formula A.t. (A. l. n. k) z-A labelling molety; and A.l. a d. a linker molety; and A.l. a be labelling molety. Also included are Imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (1) to the patient, of and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition or a kit for preparing a radiopharmaceutical preparation comprising (1), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in the insering argued or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid capacition and for diagnosing an amyloid cepture of the imaging of transmissible virus dementiae), familial CJD, creepral amyloidosse (transmissible virus dementiae), familial CJD, creepral amyloidosis, faline spongiform encephalopathy, bovine spongiform creepral amyloidosis, faline spongiform encephalopathy, the agents are capable of crossing the blood-brain capacitic and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the present sequence is a peptide forming the amyloid targeting moiety of the present sequence is a peptide forming the amyloid targeting moiety of the
                                                                                                                                                                                                                                     New amyloid-targeting imaging agents useful for in vivo imaging amyloid plagues and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; Alzheimer's disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; cerebral amyloid anglopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The amyloid targeting moiety, a linker moiety and a labelling moiety. The capent is of general formula A.t. (A.l.n.k) z.A.l.a.b (1) where z = 0 - 1; A.t. = an amyloid targeting moiety. Also included are Imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving amyloid-related condition or administering (1) to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition (2), and a kit for preparing a radiopharmaceutical preparation comprising (1), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in condition or amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creuzfeldt-Jakob disease (CDD), kuru, transmissible creeptal amyloidoses (transmissible virus dementias), familial CDD, creeptal amyloidosis (transmissible virus dementias), familial CDD, creeptal amyloidosis, faline spongiform encephalopathy, non-transmissible creeptal amyloidosis, lifthemation-associated amyloidosis, creebtal amyloidosis, light chain-related amyloidosis, land angiopathy. The agents are capable of crossing the blood-brain charrier and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the present sequence is a peptide forming the amyloid targeting moiety of the consent sequence is a peptide forming the amyloid targeting moiety of the present sequence is a peptide forming the amyloid targeting moiety of the consent sequence is a peptide forming the amyloid targeting moiety of the more parageting moiety of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #10, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                   New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

```
The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzhaimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU1649-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide #1, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           All-D-amyloid-beta peptide, Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; anhylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyslonephritis; osteomyalitis; whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cycostatic; uropathic; therapy.
                                                                                                                                                                              The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D - amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta in a mammal and the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankyloising spondylltis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial
                                                              Prevention and/or treatment of an amyloid-related disease e.g.
Alzheimer's disease, comprises use of all-D-amyloid-beta peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 29; DB 6; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                     The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11610 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                          Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; opthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis;

                                                                                                                                       The invention relates to a method for prevention and/or treatment of amyloid-related disease which comprises administration of an all-D-amyloid-related disease which comprises administration of an all-D-amyloid-bet apptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including carthritis, ankylosing spondylitis, psoriasis, jovenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hodgkin's lymphoma, renal carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The invention is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mmyloid-beta; amyloid-beta related disease;

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats anyloid-beta related disease; and (b) a gent (a1) that prevents or treats anyloid-beta fabrils formation or induces a prophylactic or therapeutic immune reponse against amyloid-beta fibril formation; or therapeutic immune spacem modulator that prevents or inhibits amyloid-beta for information or information and information or interpretation. Also described is a kit comprising (C): (C) have noticity in numans system modulators that prevents or inhibits amyloid-beta fibril formation modulators, and as noticity anticonvulsant, antidepressant, endorine and hypnotic activities, use and as anyloid-beta fibril formation modulators, and as numune system modulators. (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used as amyloid-beta fibril formation dementia, campled-beta related disease (G) and anyloid-beta fibril formation and hypnotic and anyloid-beta fibril formation and hypnotic and anyloid-beta induced anyloid-beta fibril formation and anyloid 
                                                                              Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes compositions (C) comprising: (a) a first agent (al) that prevents or treats amyloid-beta related disease; and (b) as escond agent (a2) that is: (1) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta fibril formation; or infibrits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have notropic, neuroprotective, cerebroprotective, haemostatic, ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser, uropathic, anticonvulsant, anti-HIV, antiparkinsonian, muscular, neuroleptic, cardiant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, mild-to-moderate cognitive impairment, vascular dementia, cerebral amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, camploid angiopathy, hereditary cerebral haemorrhage, senile dementia, degeneration, or a condition associated with Alzheimer's disease (including hypothyroidism, cerebrovascular disease, cardiovascular disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy,

Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.

Disclosure; Page 67; 143pp; English.

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease; and (b) a second agent (a2) that is: (i) a peptide or peptideminetic that cagent (a2) that is: (i) a peptide or peptideminetic that a second agent (a2) that is: (i) a peptide or peptidemetic that condulates amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta inhibits amyloid-beta fibril formation; or (ii) an immune system modulator that prevents or inhibits amyloid-beta correptor, neuroprotective, recebroprotective, haemostatic, cophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser, notroprotective, antithyroid, vasotropic, cardiovascular, tranquilliser, nuropethic, antitornulasmit, anti-lity antipharkimonian, muscular, neuroleptic, dardiant, antidepressant, endocrine and hypnotic activities, and came be used as amyloid-beta fibril formation modulators, and as immune system modulators (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic formation produce and can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including hypothyroidism, carebroanalar disease, cardiovascular degeneration, or a condition associated with Alzheimer's disease (including hypothyroidism, carebroascular disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, bown's syndrome, inclusion body myositis, age-related meaular disease, memory loss, anxiety, a behavioural dysfunction (e.g. muthington's disease, memory loss, anxiety, a behavioural disease, cardiovascular confination, gardia apraxia, agnosia, pick disease, dementia disease, aprospe, neuroleptic sensitivity, normal pressure hydrocephalus subdural haematoma, brain tumour, posttraumatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, depressed mood, irritability, anhedonia, social withdrawal, or accessive guilt)) in a subject e.g. human h

The imaging agent comprises an amyloid targeting moiety (such as a peptide) joined to call a labeling moiety, and is preferably able to cross the blood-brain barrier. The invention also relates to a kit for the blood-brain partier. The invention also relates to a kit for the blood-brain barrier. The invention also relates to a kit for the blood-brain barrier. The invention and a patient and a method for imaging amyloid deposition in a patient and a method for imaging amyloid deposition in a patient and a method for imaging agent is useful in imaging to diagnose amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-caraptions and a cerebral amyloidoses (also known as transmissible virus cementias), familial CJD, scrapte, transmissible mink encephalopathy, contrammissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-contransmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-contransmissible amyloidosis (e.g. Alzheimer's disease), prion-contransmissible amyloidosis (e.g. Alzheimer's disease) and permite an earlier diagnosis of amyloid-related conditions, thereby allowing earlier treatment and hence crevention of the undesirable effects of such disorders. Sequences captured amyloid-targeting moiety in an imaging agent of the invention.

The invention relates to an amyloid-targeting imaging agent. The imaging agent comprises an amyloid targeting moiety (such as a peptide) joined to a labeling moiety via a linking moiety, and is preferably able to cross the blood-brain barrier. The invention also relates to a kit for the blood-brain barrier. The invention a lost the imaging agent of the invention, a method for imaging amyloid deposition in a patient and a method for imaging amyloid-clated condition in a patient. The amyloid-targeting imaging agent is useful in imaging to disgnose amyloid-captured conditions such as Creutzfeld-Jakob disease (CJD), Kuru, transmissible crebral amyloidoses (also known as transmissible virus dementias), familial CJD, scrapie, transmissible mink encephalopathy, concernamissible cerebral amyloidosis, faline spongiform encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis (e.g. Alzheimer's disease), prion-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion mediated diseases, dialysis-related amyloidosis, light chain-related amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a myloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a myloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a patient. The agent does not exhibit excessive toxicity or irritation, does not induce an allergic response, and permits an earlier disagnosis of

The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in
                                                                                                                                                                                         ö
amyloid-related conditions, thereby allowing earlier treatment and hence prevention of the undestrable effects of such disorders. Sequences ADY37921-ADY37947 and ADX37949 represent peptides which may be used as the amyloid-targeting moiety in an imaging agent of the invention.
                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for inhibiting amyloidosis and/or for cytoprotection. The peptides of ABA84474-B48486 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides ABA84874-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                                                                                                                                                                                                                                          Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptides AAB48474-B48496 are antifibrillogenic agents that can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABS2622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' c aygregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or at least 1 region of an amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides and cimmunogenic peptidomimetics. Examples include all-D peptides and cimmunogenic peptidomimetics. Examples include all-D peptides of the amyloid-beta peptide and the all-D derivative peptides given in AABS2613-64. The vaccine elicits a preferential TH-2 or TH-1 response, preventing fibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, corresponding infection (e.g. bovine apposition encephalitis, chronic infection (e.g. tuberciulosis) or chronic inferience (erronic infection (e.g. tuberciulosis) or chronic inferience (erronic chronic infection (e.g. tuberciulosis) or chronic inferience.
                                                                                                                                                                                                                                                                                                                                           Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        familial Mediterranean fever (FMF) and systemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AB4848474-B488496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AB48474-B48486 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                                                     Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alzheimer's disease; amyloidosis; amyloid-related disease; vaccine;

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The amyloid targeting moiety, a linker moiety and a labelling moiety. The cagent is of general formula A.L.(A.l.n k) z.A.l.abelling moiety; and A.l.abelling moiety. Also included are imaging amyloid deposition or administering (1) to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition a patient to determine the presence of amyloid or amyloid-related condition at kit for preparing a radiopharmaceutical preparation comprising (1), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible condition e.g. Creutzfeldt-Jakob disease (CDD), kuru, transmissible creeparal amyloidoses (transmissible virus dementias), familial CJD, creeparal amyloidoses (transmissible virus dementias), familial CJD, creeparal amyloidosis, feline spongiform encephalopathy, non-transmissible creeparal amyloidosis, light chain-related amyloidosis, creebaral amyloidosis, light chain-related amyloidosis, creebaral amyloidosis, light chain-related amyloidosis, creebaral amyloidosis, light chain-related amyloidosis, creapale of binding specifically to amyloid plaques. The parent squance is a peptide forming the amyloid targeting moiety of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                  Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; afflammation associated amyloid; disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; cerebral amyloid angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         1. .6

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gervais F,
                                                                                                                                                                                                                                                                                                                                                                  Synthetic.
  The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABS262), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acids to restidues synthesised from the unnatural D-configuration amino acids to reptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid procein, e.g. the beta-sheet region or at least 1 region of an amyloid procein, e.g. the beta-sheet region or at least 1 region of an amyloid procein, e.g. the peptides and immunogenic peptidomimetics. Examples include all-D peptides and immunogenic peptidomimetics. Examples include all-D peptides and 36-42 of the amyloid-beta peptide and the all-D derivative peptides of preventing fibrillogenesis and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, charled diseases are scrapic, cerebral amyloid angiopathy, and prion protein related diseases, e.g. bovine spongiform encephalitis, chumanicid arthritis), familial Mediterranean fever (FMF) and systemic archematical arthritis) and systemic amyloid angiotal fever (FMF) and systemic archematical arthritis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The agent is of general formula A.t. (A.l.n.k) z.A.l.a.b. [1] where z = 0 - 1; A.t. = an amyloid targeting moiety. Also included are limaging amyloid deposition or dagnosing an amyloid-related condition in a patient involving administering (1) to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition or amyloid related condition or anyloid related condition or anyloid related condition is a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation amyloid related condition or the imaging of amyloid or an amyloid-related condition or an amyloid-related condition. The agents are used for imaging amyloid deposition amyloid-related condition. The agents are used for imaging enviloid deposition amyloid-related condition. The agents are used for imaging amyloid deposition amyloid-related amyloid sease (CDD), kuru, transmissible creeptaal amyloidosse (transmissible virus dementiae), familial CJD, creeptaal amyloidosse, failine appongiform encephalopathy, non-transmissible creeptaal amyloidosis, lifiammation—associated amyloidosis, creebtaal amyloidosis, lifiammation—associated amyloidosis, creebtaal amyloidosis, light chain-related amyloidosis, creebtaal amyloidosis, light chain-related amyloidosis, light chain-related amyloidosis, amyloid angiopathy. The agents are capable of crossing the blood-brain character sequence is a peptide forming the amyloid targeting moiety of the agent of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                             Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapte; transmissible mink encephalopathy; SSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; afflammation associated amyloid; Alzeimer, disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; cerebral amyloid anglopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                ...6

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral maniopathy, particularly Alzheimer's disease, hereditary cerebral free present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                 Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy;
CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease;
cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                         Peptide #17, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage to reserving a disease, hereditary cerebral haemorrhage with mayloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                       Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                   Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                Peptide #9, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis;

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and cavours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal, and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's Gisease AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus cleras, chronic pyelonephritis, osteomyelitis and Whipple's disease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease; and (b) computed (a2) that is: (i) a peptide or peptidominetic that modulates amyloid-beta fibril formation or induces a prophylactic or therefore amyloid-beta fibril formation or induces a prophylactic or therefore in immune response against amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have crebroporotective, haemostatic. (c) neuroprotective, cerebroporotective, haemostatic. (c) neuroprotective, anti-HIV, anti-parkinsoniar, muscular, neuroleptic, cardiant, anti-HIV, anti-parkinsoniar, muscular, corporated cardiant, anti-HIV, anti-parkinsoniar, muscular, corporated cardiant, anti-depressant, endocrine and hypmotic activities, and can be used as amyloid-beta fibril formation modulators, and as comploid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, comploid angiopathy, hereditary cerebral haemorrhage, senile dementia, corporation, or a condition associated with Alzheimer's disease (c) cincluding hypothyroidism, cerebrovascular disease, amenory loss, anxiety, a behavioural dysfunction (e.g. Huntington's disease, amyotrophic lateral solerosis, acquired immunodeficiency, disease, amyotrophic lateral solerosis, acquired immunodeficiency, emith Lewy bodies, altered muscle tone, saizures, sensory loss, visual continues, incoordination, gait disturbance, transient falls, field deficits, incoordination, gait disturbance, transient falls,
                                                                                                                                                                                                                            cerebral amyloid angiopathy; hereditary cerebral haemorrhage;
senile dementia; Down's syndrome; inclusion body myositis;
age-related macular degeneration; hypothyroidism;
cerebrovascular disease; cardiovascular disease; memory loss; anxiety;
behavioural dysfunction; neurological condition; psychological condition;

The present invention describes compositions (C) comprising: (a) a first

degree (al) that prevents or treats ampload-beta felated disease; and (b) andulates amyloid-beta fibril formation or induces a prophylactic or therapeutic limmune response against amyloid-beta fibril formation, or therapeutic limmune response against amyloid-beta fibril formation, or therapeutic limmune response against amyloid-beta fibril formation, or contropic in munch system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have notropathic, antidepressant, anti-HIV, antidepressant, muscular, muscular, uropathic, antidepressant, anti-HIV, antidepressant, muscular, muscular, neuroleptic, cardiant, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, mild-to-moderate cognitive impaliment, vascular dementia, cerebral amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, completed angiopathy, hereditary cerebral haemorrhage, senile dementia, completed angiopathy, hereditary cerebral haemorrhage, condition, or a condition associated with Alzheimer's disease, meory loss, anxiety, a behavioural dysfunction (e.g. Huntington's disease, amportrophic lateral sclerosis, acquired immunodeficiency, Parkinson's disease, appraisa, appraisa, peraka, per agent (a1) that prevents or treats amyloid-beta related disease; and (b) having amyloid-beta deposits. The present sequence represents a peptide that can be used as an antifibrillogenic amyloidosis inhibiting peptide in the exemplification of the present invention.

Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.

Disclosure; Page 70; 143pp; English.

The present invention describes compositions (C) comprising: (a) a first captured (ia) that prevents or treats amyloid-beta related disease; and (b) agent (a) that is: (i) a peptide or peptideminetic that modulates amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta prophylactic or therapeutic immune response against amyloid-beta prophylactic or therapeutic immune response against amyloid-beta inhibits amyloid-beta fibril formation; or (ii) an immune system modulator that prevents or inhibits amyloid-beta for incurportective, remorprotective, response against amyloid-beta fibril formation modulators. (C) have noctropic, neuroprotective, ranityly antiparkinsonian, muscular, northeral anti-thy antiparkinsonian, muscular, neuroleptic, ardiaut, antidepressant, endocrine and hypnotic activities, and as immune system modulators. (C) can be used for preventing or treating an enroleptic, cardiaut, antidepressant, and hypnotic activities, and as immune system modulators. (C) can be used for preventing or treating an immune system modulators. (C) can be used for preventing or treating an immune system modulators (C) can be used as amyloid-beta fibril formation modulators, and as immune system modulators (C) can be used as amyloid-beta fibril formation modulators, and as important and presents of anyloid-beta related disease (amplainent, vascular dementia, carbitaty), and complete anyloid anyloidapthy, hereditary cerebral hamorrhade; and anyloid anyloidapthy, hereditary cerebral and anyloid anyloidapthy, hereditary cerebral and anyloidal confloids, age-related macular disease, amyotrophic lateral scleroids, acquired immunodeficiency, anyloid disease, amyotrophic lateral scleroids, acquired immunodeficiency, succeeding with Lewy bodies, altered muscle tone, seizures, sensory loss, visual track, transient alternal scleroids, actives, sensory loss, usual therewith anyloid deficits incoordination, sexual disantantian, attention, depressed mood irritability, anhedonia, social withdrawal, or a psy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The Intention Featers to an amyloid targetty (such as a peptide) joined to a labeling moiety via a linking moiety, and is preferably able to cross the blood-brain barrier. The invention also relates to a kit for preparation are relates to a kit for preparing a radiopharmaceutical preparation from the imaging agent of the invention, a method for imaging amyloid deposition in a patient and a method for diagnosing an amyloid-related condition in a patient. The amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-related conditions such as Creuzfeld-Jakob disease (CDD), Kuru, transmissible cerebral amyloidoses (also known as transmissible virus dementias), familial CJD, scrapie, transmissible mink encephalopathy, bovine spongiform encephalopathy (BSB), inflammation-associated amyloid, type II diabetes, primary amyloidosis, faline spongiform encephalopathy, con-transmissible cerebral amyloidosis, faline spongiform encephalopathy or non-transmissible cerebral amyloidosis, alight chain-related amyloidosis, cerebral amyloidosis, and permits an earlier diagnosis of amyloid-related conditions, thereby allowing earlier treatment and hence amyloid-related conditions, thereby allowing earlier treatment and hence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an amyloid-targeting imaging agent. The imaging agent comprises an amyloid targeting moiety (such as a peptide) joined to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New amyloid-targeting imaging agent, useful for diagnosing an amyloid-related condition, e.g. Creutzfeld-Jakob disease, bovine spongiform encephalopathy, primary amyloidosis or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prevention of the undestrable effects of such disorders. Sequences ADY37921-ADY37947 and ADY37949 represent peptides which may be used the amyloid-targeting moiety in an imaging agent of the invention.
                                                                                                                                                                                                                                                            Amyloid-targeting peptide, SEQ ID NO:8, for use in imaging agent.

The invention relates to an amyloid-targeting imaging agent. The imaging agent comprises an amyloid targeting moiety (such as a peptide) joined to a labeling moiety via a linking moiety, and is preferably able to cross the blood-brain barrier. The invention also relates to a kit for the blood-brain barrier. The invention also relates to a kit for the blood-brain barrier. The invention also relates to a kit for preparing a radiopharmaccutical preparation from the imaging agent of the invention, a method for imaging amyloid deposition in a patient. The amyloid-targeting imaging amyloid-related condition in a patient. The amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-related conditions such as Creutzfeld-Jakob disease (CJD), Kuru, transmissible cerebral amyloidoses (also known as transmissible virus dementias), familial CJD, scrapie, transmissible mink encephalopathy, concentrated to amyloidosis (e.g. Alzheimer's disease), prion-mayloidosis, feline appongiform encephalopathy, concreament amyloidosis (e.g. Alzheimer's disease), prion-mayloidosis, feline appongiform encephalopathy, concreated amyloidosis (e.g. Alzheimer's disease), prion-mayloidosis, cerebral amyloidosis, cerebral amyloidosis (e.g. Alzheimer's disease), prion-mayloid-related conditions, thereby allowing sariler tracement and hence prevention of the undestrable effects of such disorders. Sequences amyloid-targeting moiety in an imaging agent of the invention.
New amyloid-targeting imaging agent, useful for diagnosing an amyloid-related condition, e.g. Creutzfeld-Jakob disease, bovine spongiform encephalopathy, primary amyloidosis or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 16; 34pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 6 AA;

The present invention describes a nucleic acid molecule (I) comprising a consecutive nucleic acid sequence (S1) of at least 15 bp in length and consecutive nucleic acid sequence encoding a prolamine complementary with a nucleic acid sequence encoding a prolamine polypeptide or a nucleic acid sequence having a homology of at least about 70% to (S1). Also described: (1) a nucleic acid molecule (N1) comprising a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid sequence encoding a prolamine polypeptide (II) containing (II) (S) a nucleic acid cassette (III) containing (I); (4) a plant tissue (VI) comprising (I); (6) a plant (VII) (C) comprising (I); (7) a plant tissue (VII) produced by (VIII); (8) a plant (VIII) or (VIII); and (VIII) or (VII
                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid molecule antisense to nucleic acid sequence encoding

foreign gene product, introducing (I) and the nucleic acid molecule encoding a foreign gene product into cell of the plant, redifferentiating the cell, producing a transgenic plant, and obtaining the seed from the transgenic plant. The method further involves isolating the gene product of the foreign gene from the seed. (I) is useful for producing transgenic plants having reduced expression of storage proteins and for reducing the expression does of a protein in a seed of a plant. The present sequence represents a rice 26kba globulin signal sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of a storage protein promoter, chosen from a sequence encoding storage protein signal sequence at the 5' end of a sequence encoding storage protein signal sequence at the 5' end of a sequence encoding allergen appecific T cell epitope peptide and/or a sequence encoding vesicle anchoring signal sequence at the 3' end, and an DNA sequence encoding a polypeptide having allergen specific T-cell epitope peptide inserted in for T-cell epitope accumulated plant preparation, and a method of accumulating allergen specific T-cell epitope in a plant. The method involves introducing (I) or (II) to a plant, obtaining DNA encoding a storage protein signal sequence to the 5' end and/or a vesicle anchoring signal sequence to the 3' end of the obtained DNA, and expressing the DNA in a plant under the control of a storage protein promoter, or obtaining DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel DNA having sequence encoding allergen specific T-cell epitope peptide, useful for accumulating T-cell epitope peptide in plants and for treating allergic diseases such as pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a DNA (I) having a sequence under the control
                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                 ö

the variable region of storage protein of the plant and expressing the peptide in the transgenic plant. The invention describes the accumulation of human T cell epitope in rice albumen, a method of accumulation of human T cell epitope in rice albumen, a method of accumulation cell the variable region of glutelin (the major storage protein of rice), and expressing and accumulating 7crp as part of the glutelin. The rice, and expressing and accumulating 7crp as part of the glutelin. The rice capable of producing the 7crp is useful as an edible vaccine against of producing the 7crp is useful as an edible vaccine against cryj or Cryj. The T-cell epitope is integrated on an edible region such as the seed of a plant. The method of the invention is useful for such as the seed of a plant. The method of the invention is useful for manufacturing a transgenic plant, preferably rice, integrated with T-cell epitope. The method is useful for preventing or treating allergic disease cuth as hay fever. The method enables the production of allergen specific T-cell epitope at a low cost and also reduces the amount for administration. The allergen specific T-cell epitope accumulated in a cadministration. The allergen specific T-cell epitope accumulated in a cadministration. The allergen specific T-cell epitope accumulated in a cadministration. The allergen requence represents rice 26 kba peptide.

Identifying modulators of AMP-activated protein kinase-mediated activation of a nitric oxide synthase (NOS), for use in ischemic heart disease, comprises testing for the increase or decrease in phosphorylation of NOS.

Example 4; Fig 5; 41pp; English.

The present sequence is the calmodulin (CaM)-binding region of mouse inducible nitric oxide synthase (iNOS). iNOS is one of three isoforms of the enzyme NOS, which synthesises nitric oxide from the amino acid Larginine. The sequence is provided for comparison with endothelial nitric

ö oxide synthase (eNOS). The threonine residue at position 495 of eNOS is phosphorylated by AMP-activated protein kinase (AMPK) in the absence of Ca2+-caM, phosphorylation results in inhibition of eNOS. In the presence of Ca2+-CaM, phosphorylation by AMPK occurs predominantly at Ser-1177 and eNOS is activated. Modulators which activate AMPK may be used in the metabolism, and improving nutrient and oxygen supply to the myocytes. They may also be used for the treatment of phosphorylation and improving nutrient and oxygen supply to the myocytes. vasotropic; antiangiogenic; gene therapy; critical limb ischaemia; CLI; eNOS; endothelial nitric oxide synthase; angiogenesis; microvascular dysfunction; human; calmodulin binidng domain; Gaps ö Length 37; 0; Indels Human nNOS calmodulin binding domain peptide segid 7. ë. The invention describes a method of creating critical limb ischaemia (CLI) comprising administering to a patient a polynucleotide encoding a mammalian eNOS (endothelial nitric oxide synthase) polypeptide. Also described are: a method for treating angiogenesis by administering to patient a polynucleotide encoding eNOS; and ameliorating microvascular dysfunction by administering to the patient the polynucleotide encoding the encoding the eNOS polypeptide. The method is useful for treating critical limb ischaemia or anglogenesis, or ameliorating a microvascular dysfunction. This is the amino acid sequence of a human neuronal nitric synthase (nNOS) calmodulin binding domain peptide. Example 1; SEQ ID NO 7; 82pp; English.

Treating critical limb ischemia (CLI), or angiogenesis comprises administering to a patient a polynucleotide encoding a mammalian endothelial nitric oxide synthase (eNOS) polypeptide.

The present sequence. The present incontained state and control in the present suppresents became the present invention describes endothelial nitric oxide synthase (eNOS) mutants having one or more mutations in an amino acid sequence corresponding to a functional domain of a mammalian eNOS.

At least one of the mutations is at a position corresponding to an amino acid residue in a calmodulin-binding domain that is phosphorylated in mammalian cells, and not an amino acid substitution to Ala or Asp. Also described: (1) an isolated eNOS polypeptide mutant that is substantially homologous, or has a 95-93% sequence identity to the amino acid sequence of the novel eNOS polypeptide mutant; (2) an isolated polymucleotide corresponding mutant; (3) a recombinant vector comprising the polypeptide mutant; (3) a recombinant vector comprising the polymucleotide operably linked to at least one regulatory sequence; (4) a playmucleotide operably linked to at least one regulatory sequence; (4) a playmucleotide; (5) a binding partner of the polypeptide mutant; (6) condulating eNOS activity in a cell by administering the polypeptide mutant is expressed in the cell; (8) diagnosing a condition associated with aberrant eNOS activity by contacting a cell, catch that the polypeptide mutant is expressed in the cell; (9) diagnosing of a condition associated with the polypeptide mutant is expressed in the cell; (9) diagnosing condition associated with the polypeptide mutant eNOS activity by contacting a cell, catcivity by administering the polypeptide mutant is expressed in the cell; (9) prophylactic and therapeutic methods of treating a condition, and (9) prophylactic and therapeutic methods of treating a condition, and (9) prophylactic activity indicative of the medical condition, and (9) prophylactic ordering the eNDS mutant has vasotropic, antiatration cand anorectic activity. The eNOS mutant has vasotropic, antiatratic and increased activity.

Cyphologous antidiabetic, vulnerary, antilipaemic and increased activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                          sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                Gaps
 The polypeptide mutant, polynucleotide and methods are useful for diagnosing or treating a condition associated with abermant eNOS activity, e.g. ischaemia, atherosclerosis, hypertension, diabetes, Raynaud's phenomenon, poor wound healing, hyperlipidaemia or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

This invention, in the area of plant biotechnology, relates to novel polymucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be useful for the amino acid sequence of a rice protein of the invention. The present sequence is the sequence data for this parent invention. Of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New plant genes encoding polypeptides having an activity involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain useful in generating plants having improved

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polyneptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arrhitis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention, in the area of plant biotechnology, relates to novel polynucleotides comprising a nucleotide sequence encoding a protein which is involved in or associated with the synthesis, metabolism or degradation of carbohydrates in the plant grain and the expression of which is up-regulated during grain filling. The plant is selected from corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco, sugarbeet, wheat, and rice. The invention may be useful for the improvement of protein, oil, starch, fibre and moisture content of the cereal grains. In addition, carbohydrate levels may be modified to a more desirable level using the present invention. The present sequence is the sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed of the view of v

(HUMA-) HUMAN GENOME SCI INC
```

```
AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I)

camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
cativity, and can be used in gene therapy and vaccine production. (I)
cytoteins and polymucleotides may be used in the prevention, diagnosis and
creatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
cypression by rectifying mutations or deletions in a patient's genome
cc that affect the activity of (I) by expressing inactive proteins or to
c supplement the patients own production of (I). Additionally, (I)
c supplement the patients own production of (I). Additionally, (I)
c polymucleotides may be used to produce the secreted (I), by inserting the
c nucleic acids into a host cell and culturing the cell to express the
c protein. (I) proteins and polymucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cc cancers and cancer metatesses of haematopoietic-derived cells. AAK64703
ct cancers and cancer metatesses of haematopoietic antigen genomic
c to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54912 to AAK54950 and AAM82169
crepresent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                      Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences having to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity to the nucleotide and protein sequences. The nucleotides and potein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases. Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein sequence of the invention.

The invention relates to novel diagnostic and therapeutic polynuclectides selected from one of the 2722 sequences defined in the specification. A polynuclectide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynuclectides (dith) or polypeptides may be used to diagnost a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp concletus may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

Into invention relates to novel nucleic acids encolain number two secreted and transmembrane proteins by any important roles in the formation, differentiation and maintenance of multicellular cognisme. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information magration or differentiation) is typically governed by information received from other cells and the immediate environment. The information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors are as pharmaceutical and diagnostic agents, such and proteins of twee anion acid sequences of novel human membrane bound receptors or and proteins of the invention may have cytostactic activities through the proteins of the invention may have cytostactic activities through the corrections of the invention may have cytostactic activities through the compour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel nucleic acids encoding human PRO secreted

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening sesays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, ostecarthritis, Leber's hereditery optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, canticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises

C determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (51) whose expression levels increase when respiratory epithelial colls are stimmlated with interleukin-13; or (b) a group of genes (52) whose expression levels decrease when respiratory epithelial cells are stimmlated with interleukin-13. Also described: (1) a reagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to treat bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease; (5) a mainal model for bronchial asthma or chronic cost obstructive pulmonary disease; (5) a mainal model for bronchial asthma or chronic cost obstructive pulmonary disease; (5) a marker gene or an antimal model for bronchial asthma or chronic cathma or chronic obstructive pulmonary disease; (6) a therapeutic agent for bronchial cathma or chronic cathma or chronic obstructive pulmonary disease; (7) a marker gene or an antisense nucleic acid corresponding to a portion of cathma marker gene or an antisense nucleic acid corresponding to a portion of captenine encoded by a marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which a polynucleoide that suppresses the capterial marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which a protein encoded by a marker gene or an antisense and contact of the marker gene.

```
The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are timulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are timulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are timulated with interleukin-13; or (b) a treagent (1) for testing for bronchial asthma or chronic obstructive pulmonary disease; (c) a kit for bronchial asthma or chronic obstructive pulmonary disease; (d) an induces that induces bronchial asthma or chronic action of the producing an animal model for bronchial asthma or chronic obstructive pulmonary disease; (e) a therapeutic agent for bronchial cells obstructive pulmonary disease; (d) a therapeutic agent for bronchial
                                                                                                                                                                                                                        ö
probe has been immobilised to assay a marker gene. (I) has respiratory and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Testing for bronchial asthma or chronic obstructive pulmonary disease by comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a

ö
asthma or chronic obstructive pulmonary disease, comprising the compound, the marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the expression of the gene through an RNA1 effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (1) has respiratory and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wood WI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to the novel association of protein sequences (and the genes which encode them) to the NP-kappaB pathway. The invention may be useful for the production of compounds with an antiinflammatory, be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheummatic, grostotatic, hepatotropic, virucide, antiarthritics antinhummatic, cytostatial-Gen antiasthmatic, antiarthritics antinhummatic, cimmunosuppressive or immunomdulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions corrected with the NP-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder, and prodeficiency, viral infections, HV-1, HTLV-1, cetodermal dysplasia, immunodeficiency, viral infections, HV-1, HTLV-1, hepatitis B, hepatitis C, BBV, influenza, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, collitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, BAB, autoimmune disorders, disorders related to hyper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Carman J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 6; SEQ ID NO 234; 237pp; English.

immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to organ transplant rejection, disorders related to aberrant signal transduction, proliferating disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human protein which is subject to the novel association with the NP-kappaB pathway of the invention. Note: This sequence does not appear in the specification but was obtained by the indexer from Genbank.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel agents that modulates the function of human apoptosis-associated proteins specified within the specification. Specifically, it refers to a method for the identification of target genes whose expression is correlated with an early stage in the regulation of apoptosis. The present invention describes a method of contacting either candidate agents or control agents to the target genes and assessing the difference of binding and inhibitory activity, where the candidate agent is selected from a low molecular weight organic molecule, an antibody or fragment thereof, an antisense oligonucleotide,
                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human; enzyme; apoptosis; cancer; inflammation; autoimmune;

            methods are useful for diagnosing and treating diseases or conditions associated with abnormal apoptosis in mammalian tissue, such as cancer, inflammation, autoimmune or neurodegenerative disorders. Accordingly, they exhibit cytostatic, antiinflammatory, immunosuppressive and neuroprotective activities. These may also be used for drug screening purposes and in gene therapy. This polypeptide sequence is a human target protein, an enzyme associated with the regulation of apoptosis whose expression is modulated by novel agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, thyroiditis, or diabetes mellitus.
inhibitory daRNA, or a ribozyme. As such, the compositions and

The invention relates to an isolated nucleic acid. The polypeptide, compound or composition, and methods are useful for disgnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimnume hemolytic anemia, autoimnume mediated skin diseases including bullous skin diseases, erythema multiforme and contact dermatitis, psoriasis, lymphasdenopathy, splenomegaly and leukopenia. The present sequence represents the amino acid sequence of a human PRO

New antisense oligonucleotides for modulating the expression of inducible nitric oxide synthase in cells or tissues, particularly useful for treating e.g. immunological, cardiovascular or neurological disorders, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to antisense compounds, especially oligonucleotides, which are targeted to a nucleic acid encoding inducible nitric oxide synthase and which specifically hybridise to and modulate
                                                                                                                                                                                                          The invention relates to two DNA molecules encoding inducible nitric oxide synthase (iNOS) proteins, where the DNA molecules comprise defined sequences of 4041 and 4165 base pairs given in the specification and the proteins have 1144 anino acids. Also claimed are expression vectors containing the DNA molecules, and recombinant host cells containing the vectors. The DNA molecules are useful for producing the recombinant proteins. The present sequence represents inducible nitric oxide, long isoform. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense oligonucleotide; inducible nitric oxide synthase; modilate expression; immunomodulator; antidiabetic; cardiovascular; cardiant; neuroprotective; vasotropic; ischaemia; reperfusion injury; 2'-0-methoxyethyl; phosphorothioate; mouse.
                                                                                                                 DNA encoding inducible nitric oxide synthase proteins - useful for producing recombinant proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                Length 1144;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IndelB

The activity of iNOS is independent of calmodulin and cellular calcium levels. Vectors concg. the DNA are used in the treatment or prevention of vascular diseases, high blood pressure, arteriosclerosis, stenosis or restenosis of blood vessels, esp. coronary vessels after percutane transluminal coronary angioplasty. See AAR77363 and AAR77362 for endothelial and brain-derived NOS

              have immunomodulator, antidiabetic, cardiovascular, cardiant, neuroprotective, disorder and vasotropic activity. The antisense oligonuclective, disorder and vasotropic activity. The antisense oligonuclectides are useful for inhibiting the expression of inducible nitric oxide synthase in cells or tissues. In particular, the antisense oligonuclectides are useful for treating diseases or disorders associated with inducible nitric oxide synthase, e.g. diabetes, immunological disorder, cardiovascular disorder, neurological disorder or ischemial freperfusion injury. The antisense oligonuclectides are also useful for research and diagnostics. The present sequence is that of mouse inducible nitric oxide synthase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptoais in the T cells and antigen presenting cells (APCS). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (M1) a tumouricidal immunocyte population in vivo in a mammal (by allowing tumour associated lipids to context immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycolipids, sphingolipids, phosphosphingolipids, gangliosides, salalylated glycans, lipopeptides and proteoglycolipids are inactivated or deleted), a construct useful in the treatment of cancer comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mammalian cell receptor, useful in the treatment of cancer by binding tumor associated lipids where the binding induces anergy or apoptosis I cells and antigen presenting cells.

superantigen (SAg) nucleotide inserted into a virus, a mammalian T cell in the treatment of cancer (where an adaptor protein which inhibiter tell activation by tumour associated antigens is deleted or functionally deactivation by tumour associated antigens is deleted or functionally deactivated), a composition useful in the treatment of cancer (comprising a lipid raft conjugated to a superantigen), producing (M2) a tumouricidal immuncoyte population ex vivo in a mammal by allowing a tumouricidal lumuncoyte population, and administering the tumouricidally activated population, and administering the tumouricidally activated immuncoytes to the host), producing (M3) a tumouricidal APC contact APCs, in which receptors for the tumour casociated lipids are inactivated or deleted to produce a tumouricidally activated population, and administering APCs to the host), producing a tumouricidal APC contact APCs, in which adaptor proteins, which inhibit T cell contact T cells, in which adaptor proteins, which inhibit T cell activated to produce a tumouricidally activated to the host), producing a tumouricidal and antigens, are deleted or functionally deactivated to produce a tumouricidally activated T cells and administering the tumouricidally activated T cells or the host, or allowing a superantigen-lipid aff to contact T cells avivo, and animistering the tumouricidally activated T cells to the host, producing (M5) cancer in a mammal (by allowing a lumouricidal T cell population in vivo in a mammal (by allowing a tumouricidal T cell activation by tumour associated antigens to contact immunosuppressive tumour associated antigens are deleted or functionally deactivated) and producing (M5) a tumouricidal T cell activation by tumour associated antigens are deleted or functionally deactivated and producing (M5) a tumouricidal and antigens are contact immunocytes in vivo in a cumouricidal composition as vivo in a mammal comprising and cumouricidal superantigens are contact immunocytes in vivo in the superantigen in a function whi specification, but was obtained in electronic format from the US patnet office website at "segdata.uspto.gov/sequence.html?DocID=20020177551" Gaps receptor; lipid-based tumour associated antigen; cytostatic; antimicrobial; gene therapy; neoplastic disease; tumour; cancer; infectious disease; iNOS. ö Length 1144; 0; Indels Score 28; DB 6; I Pred.                                                                                                                                                                                    for
                                                                                                                                                                                                                                                                                         The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (sancer), and infectious diseases. This sequence represents iNOS polypeptide, a cell surface moiety, the DNA of which can be transfected into a cell with superantigen DNA to generate antitumour immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide encoding a variant of a corresponding wild-
type nitric oxide synthase, useful for reducing the restenotic response
after angioplasty, or for inhibiting the development or onset of
premature labor.
                                                                                                                                                       New receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumor associated antigens, useful treating a neoplastic disease or tumor, and infectious diseases.

the tryptophan in the alpha 3 helias substituted by tyrosine or phenylalamine. Also included are a nucleic acid construct comprising the nucleotide sequence that encodes a variant of a corresponding wild-type nitric oxide synthase and a promoter operably linked to the encoding sequence of the variant and a transformed cell comprising the construct, where the cell expresses the nitric oxide synthase variant. The variant can in vitro enzymatic activity that is greater than the in vitro enzymatic activity of the corresponding wild-type nitric oxide synthase. The variant can preferably be of a corresponding wild-type endothelial nitric oxide synthase (INOS), new polymucleotides are useful for reducing the restenotic response after angioplasty, or related interventional procedures, or to enhance the vasodilation response in treating angina, for anticancer therapy to promote cell death, and for inhibiting the development or onset of premature labour. The inhibiting the development or onset of premature labour. The polymucleotides are useful to achieve or augment expression of NOS in the content of the variant or onset of premature labour. The content of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Testing for bronchial asthma or chronic obstructive pulmonary disease by comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a healthy subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          variant proteins or polypeptides in vivo to increase NOS production in target tissue, tussue, tissue of the nervous system, including brain, penile (e.g. in erectile dysfunction) and uterine tissue, and lung tissue. NOS is useful for maintaining vascular tone and regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           bronchial asthma; chronic obstructive pulmonary disease;
respiratory epithelial cell; interleukin-13; respiratory; antiasthmatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method of testing for bronchial asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          regional blood flow. The present sequence is wild-type mouse iNOS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Testing for bronchial asthma or chronic obstructive pulmonary disease by comparing the expression level of a marker gene in a biological sample

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy employed, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (51) whose expression levels increase when respiratory epithelial colls are stimulated with interleukin-13; or (b) a group of genes (52) whose expression levels decrease when respiratory epithelial colls are stimulated with interleukin-13. Also described: (l) a reagent (l) for careful for screening for a candidate compound for a therapeutic agent contract bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease; (s) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (d) a therapeutic agent for bronchial cobstructive pulmonary disease; (d) a therapeutic agent for bronchial cobstructive pulmonary disease, comprising the compound, a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene or an antisense nucleic acid corresponding to a portion of the expression of the gene through an RNAi effect or an antibody recognising captorin encoded by a marker gene; and (7) a DNA chip for testing for captivities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent in the marker gene; and can be used in gene therapeutic agent in the present in the pre ö from a subject with the expression level of the gene in a sample from healthy subject.                                                                                                            The invention relates to a composition for treating a tumor or neoplastic disease in a subject. Also described: (1) a mammalian cell comprising an exceptions nucled; caid encoding a superantigen expressed in the cell, which cell also produces or expresses all alpha-anomers of which cell also produces or expresses all alpha-anomers of monoglycosylceramide or diglycosylceramide; where expression of the companies of electring an antitumor immune response in a mammal into which the cell is introduced; (2) treating a tumor or neoplastic disease in a subject; (3) preparing a population of immunotherapeutic T or natural killer T (NKT) cells useful to treat a tumor or neoplastic disease in a subject; (4) an apoptotic cell preparation or lysate useful for treating a tumor or lysate useful for treating a tumor or neoplastic disease in a subject; comprising a cell population that has considered with haked DNA encoding a superantigen, and treated to undergo apoptosis or lysis; and (5) a cell that has ingested or been transfected with the above apoptotic preparation or lysate, thus.

Cu rendering the cell effective in presenting material expressed from transfecting nucleic acid or material ingested to the immune system of a mammal to elicit an anti-tumor immune response. The composition and command to elicit an anti-tumor immune response. The composition and present sequence represents a VEGF protein sequence data for this cample from the present invention. Note - The sequence data for this example from the present intently from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                  New composition for treating a tumor or neoplastic disease in a subject comprises conjugates comprising superantigen polypeptides or nucleic acids with other molecules that produce a tumoricidal response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Beta-amyloid; modulator; amyloid plaque; brain lesion; amyloidosis; cerebrai blood vessel; Alzheimer's disease; amyloidogenic protein; familial amyloidogenic protein; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; isolated cardiac amyloidosis; systemic senile amyloidosis; insulinoma; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; urticaria; adult-onmet diabetes; familial Mediterzanean fever; therapy; deafness; scrapie; familial amyloid nephropathy; hereditary cerebral haemorrhage.
New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

prevention of Alzheimer's disease. Example 12; Col 64; 52pp; English

```
AAW02110-W02332 represent the peptide portions of the beta-amyloid modulator compounds of the invention. Beta-amyloid peptide is a 4 kilodalton peptide that is the major protein component of amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The amyloid modulators of the invention comprise an amyloid organic protein or peptide (such as this sequence) coupled directly or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declain, a cholamyl group, a bottin containing group, or a fluorescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural amyloid proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with the natural serial amyloid poptence or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as familial amyloid oradioman, familial Mediterranean fever, familial amyloid cardiomy pathy. Creutzfeldt-Jakob disease, adult-onset diabetes, insulinoma, familial Mediterranean fever, familial namyloid compropathy with urticaria and deafness, hereditary cerebral haemorrhage and other types of amyloidosis. The modulators are also useful for the treatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; beta-amyloid peptide; Alzheimer's disease; amyloidogenic protein; aggregation; neurotoxicity; amyloidosis; Down's syndrome; cardiomyopathy; familial amyloid polyneuropathy; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; bAP.

a bAP derivative

Sequence 6 AA;

The present invention describes beta-amyloid peptide (bAP) derivatives. The bAP derivatives inhibit aggregation of amyloidogenic proteins and peptides, specifically bAP, and their neurotoxicity, so are useful for treating and preventing any disease involving amyloidosis, specifically Alzheimer's disease but also Down's syndrome, familial amyloid polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and creutzfeldt-Jakob disease. The bAP derivatives are also used to diagnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives. Some bAP derivatives inhibit bAP aggregation when we have a present in molar excess. The present sequence represents

Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB46474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                            Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cycoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB4847-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.

The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and cher amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABS2622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid fragments with other amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, eg. the beta-sheet region or GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidomimetics. Examples include all-D peptides

Corresponding to residues 1-42, 1-40, 1-32, 1-28, 1-7, 10-16, 16-21 and 36-42 of the amyloid-beta peptide and the all-D derivative peptides given they are anyloid as and ascoine all-inter a preferential TH-2 or TH-1 response, reventing fibril Nomensis and ascoine all-inter a more application and assoine and assoined as anyloid assoined and the all-D derivative peptides and reventing fibril Nomensis and assoined anyloid and assoined and assoined anyloid and assoined anyloid any

Amyloid modulator useful for treating a disorder associated with amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment coupled to a modifying group.

Example 12; Page 35; 41pp; English.

The invention describes an amyloid modulator comprising an amyloidogenic protein and/or peptide fragment coupled to a modifying group so that the compound modulates the aggregation of natural amyloid proteins or peptides. The modulator is used for treating a disorder associated with amyloidosis e.g. familial amyloid cardiomypathy (Danish type), and Swedish types), familial amyloid cardiomypathy (Danish type), cand Swedish types), familial amyloid cardiomypathy (Danish type), cand Swedish types), familial amyloid cardiomypathy (Danish type), considered cardiac amyloid, systemic senile amyloidosis, acrapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset diabetes, Gerstmann-Strausslor-Scheinker syndrome, insulinoma, isolated arrial amyloidosis, idiopathic (primary) amyloidosis, myloidosis, insulinoma, isolated cardiar amyloidosis, familial Mediterranean Fever and familial amyloidosis, familial Mediterranean Fever and familial amyloidosis associated with long term haemodialysis, hereditary non-neuropathic systemic amyloidosis of Finish type, amyloidosis associated with long term haemodialsis, hereditary creations of Finish type, amyloidosis associated with amyloidosis and lysozyme-associated hereditary creating a

ö amyloid protein (beta-AP) aggregation of natural amyloidogenic proteins or peptides when contacted with a molar excess amount of natural beta-APs relative to the modulator. Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.

Disclosure; Col 18; 54pp; English.

The present invention describes an amyloid modulator compound (I) comprising an aggregation core domain and a modifying group attached to it. (I) has nootropic, neuroprotective, immunosuppressive, antimicrobial, antidiabetic, antipyretic, dermatchlogical, cardiovascular, nephrotropic antidiabetic, and can be used as a natural amyloid aggregation inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide (beta-AP). (I) are used in the manufacture of a medicament for the diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's disease and other clinical occurrences of beta amyloid deposition such bown's syndrome individuals and in patients with hereditary cerebral haemorrhage with amyloidosis, and for treating a disorder associated when the amyloidosis such as familial amyloid polyneuropathy. (I) reduces the toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)

instructions for the preparation and use of the radiopharmaceutical in the imaging of amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible cerebral amyloidoses (transmissible virus dementias), familial CJD, scrapie, transmissible mink encephalopathy, bovine spongiform encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases, dialysis-related amyloidosis, Iight chain-related amyloidosis, cerebral amyloid angiopathy. The agents are capable of crossing the blood-brain barrier and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to antifibrillogenic agents (ABB83281-ABB83298), derived from human islet amyloid polypeptide (IAPP, ABB83307). The present sequence is a peptide fragment of the amyloid-beta (Abeta) peptide. Aggregation of IAPP, also known as amylin, or Abeta results in fibrillar accumulations, leading to amyloidosis. The antifibrillogenic peptides prevent fibril formation and amyloidosis and hence control folding or deposition of amyloid proteins. The antifibrillogenic peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antifibrillogenic peptide useful for inhibiting amyloidosis and/or for cytoprotection in the treatment of amyloidosis disorders e.g. type I or type II.
                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral myloid mamorarinage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11610 & AAU11911) that were used in the invention as a carier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid anglopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer'e
disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
          inhibiting or treating amyloidosis or amyloid deposits e.g. Type I and Type II diabetes and/or for cytoprotection. They are also useful for treating secondary amyloidosis associated with chronic infection e.g. tuberculosis and chronic inflammation e.g. rheumatioid arthritis, and familial inflammation, fever, neurodegenerative diseases e.g. scrapie, bovine spongy form encephalitis, Creutzfeldt-Jacob disease, Alzheimer', disease, cerebral amyloid angiopathy
                                                                                                                                                                                                                       Gaps
invention are useful in the manufacture of a medicament

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU1669, AAU1911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

| Sequence 61, Application US/08766596A
| Patent No. 6462J11
| GENERAL INFORMATION:
| APPLICANT: BAUGANN, Marc
| APPLICANT: BAUGANN, Marc
| APPLICANT: FRANCIONE Blas
| TITLE OF INVENTION: COMPOSITIONS THEREOF FOR TREATMENT OF DISORDERS OR DISEASES
| TITLE OF INVENTION: DEPOSITE MITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE
| TITLE OF INVENTION: DEPOSITS
| NUMBER OF SEQUENCES: 69
| CORRESPENDENCES: 69
| CORRESPONDENCES: 69
| CORRESPONDENCES: 69

Patent No. 6462171

GENERAL INFORMATION:
APPLICANT: SOTO-JARA, Claudio
APPLICANT: SOTO-JARA, Claudio
APPLICANT: PRANGIONE, Blas
TITLE OF INVENTION: PEPTITIONS THEREOF FOR TREATMENT OF DISORDERS OR DISEASES
TITLE OF INVENTION: ASSOCIATED WITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE
TITLE OF INVENTION: DEPOSITS
NUMBER OF SEQUENCES: 69
CORRESPONDENCE ADDRESS:
ADDRESSEE: BROWDY AND NEIMARK
                  Patent No. 6462171
GENERAL INFORMATION:
APPLICANT: SOTO-JARA, Claudio
APPLICANT: BAUNANN, Marc
APPLICANT: BAUNANN, Marc
APPLICANT: BANGIONE, Blas
TITLE OF INVENTION: PEPTIDES AND PHARMACEUTICAL
TITLE OF INVENTION: COMPOSITIONS THEREOF FOR TERATMENT OF DISORDERS OR DISEASES
TITLE OF INVENTION: DEPOSITS
NUMBER OF SEQUENCES:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       쉼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-08-617-267C-14

Sequence 14, Application US/08617267C

Sequence 14, Application US/08617267C

Patent No. 6319498

GENERAL INTORNATION:

APPLICANT: Findeis, Mark A. et al.

TITLE OF INVENTION: Modulators of Amyloid Aggregation
INTHER OF SEQUENCES: 45

CORRESPONDENCE ADDRESS:

ADDRESSEE: LAHIVE & COCKFIELD, LLP

STREET: 28 State Street

CITY: BOSTON

STATE: Massachusetts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               93.1%; Score 27; DB 1; Length 15; 83.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 14, Application US/08630645

Patent No. 5948763

GENERAL INFORMATION:
APPLICANT: BANDANN, Marc
APPLICANT: BANDANN, Marc
APPLICANT: BANDIONE, Blas
TITLE OF INVENTION: THEREOF FOR TREATMENT OF DISORDERS OR DISEASES ASSOCIATED
TITLE OF INVENTION: WITH PROTEIN FOLDING INTO AMYLOID OR AMYLOID-LIKE DEPOSITS
NUMBER OF SEQUENCES: 26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 21, Application US/09724940

Sequence 21, Application US/09724940

Patent No. 6905666

GENERAL INFORMATION:
APPLICANT: Schenk, Dale B.
APPLICANT: Bard, Frederique
APPLICANT: Vaequez, Nicki
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
TITLE OF INVENTION: Prevention
TITLE OF INVENTION PREVENT OF 15200-11-28
FILE REFERENCE: 152704-04755000
CURRENT FILING DATE: 2000-11-28
FRIOR APPLICATION NUMBER: US/09/580,015
FRIOR PILING DATE: 1999-65-28
FRIOR PILING DATE: 1998-11-30
FRIOR PILING DATE: 1998-11-30
FRIOR APPLICATION NUMBER: US 60/080,970
FRIOR APPLICATION NUMBER: US 60/080,970
